

Project Ruth

Building Initiatives

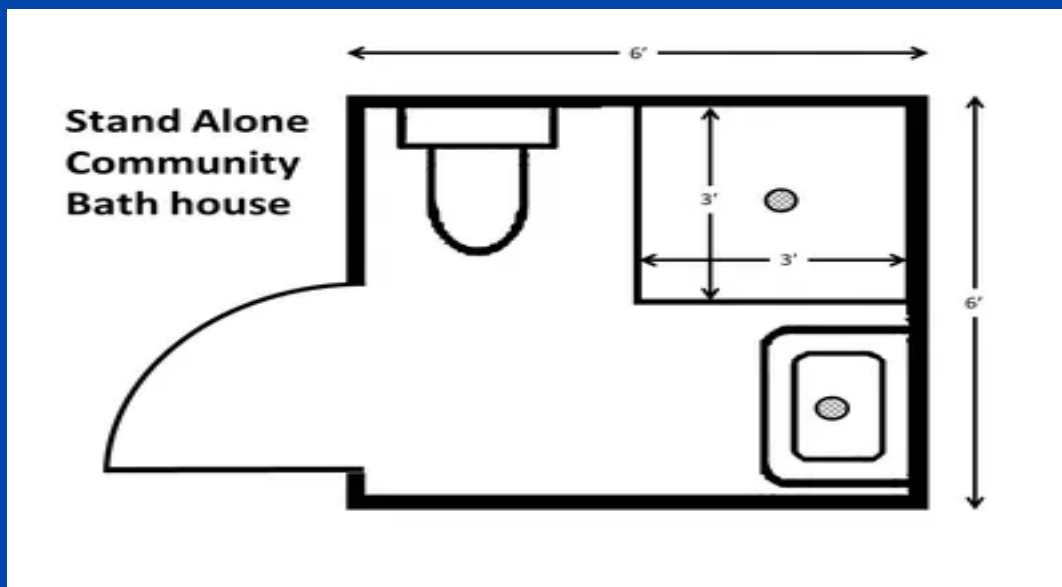

2024-2025

Bath houses for the community

Working side by side with the residents our goal is to build small bath houses for the community. Many of the residents have no privacy when they bathe or use the restroom, performing these basic human tasks in the open. Most of those that do have facilities do so in a structure with a vault toilet and no running water. Our proposed bath houses include a flushable toilet, shower, sink, changing area, and running water.

This project would be ideal for ongoing mission trip activities and offers short-term construction mission teams to work side by side with the residents of the community we serve. Our goal is to build 10.

Estimated cost for this project is \$1,500 USD per bath house.

Painting, Maintenance, and Upgrades

A separate fund for building maintenance and upkeep. Installation of roof gutters and water run-off collection. Paint to keep the buildings looking fresh and clean. Our immediate need is the touch up painting and minor repairs and improvements to the Medical Clinic and School. Once completed there will be:

- Fresh paint on exterior of buildings
- New kitchen on the ground floor
- Minor cracks patched.
- Apartments for Doctor and Nurse (currently the doctor and nurse must travel each day).

Total Cost: \$7,000.00 USD

This project would be ideal for ongoing mission trip activities.

Fencing

Enclose the Project Ruth facilities with a cement and metal fence and provide controlled, secure access to the property.

Estimated cost: \$5,000.00 USD.
